

The following is a list of tips and recommendations for care, cleaning, and maintenance of your interior and exterior signage.

Interior Signage (no Braille, raised lettering, silkscreen, or vinyl applied text to the surface)

- Signs should be dusted/cleaned once each season (every 90 days/three months)
- Use a clean, non-abrasive cotton cloth or paper towel to gently dust the signage
- If spots or fluids have accumulated, you can use a mild dish soap and water mixture to gently wipe down the sign, but you must blot-dry the sign completely. Do not leave moisture on the sign and do not scrub the surface where letters are present

Interior Signage with Braille or Raised Letters and Logos

- Signs should be dusted/cleaned once each season (every 90 days/three months)
- Use a clean, non-abrasive cotton cloth to gently dust the signage
- Signs should be kept in climate controlled environments and should not be subjected to high levels of humidity or accumulated moisture
- If liquids are accidentally applied to the sign, blot-dry the sign completely

Exterior Signage (Aluminum, Acrylic)

- Signs should be washed once each season (every 90 days/three months)
- Exterior signs should be washed with clean water and mild detergent as required

Vinyl

- Signs should be washed once each season (every 90 days/three months)
- Exterior signs should be washed with clean water and mild detergent as required

Never Use the Following Items for Care and Maintenance

- Abrasive cloths, sponges or scrubbing brushes
- Cloths that were used to clean other surfaces (helps avoid unintended chemical reactions)
- Detergents containing ammonia or solvents
- Methylated spirits, solvents or any acids
- Detergents containing abrasives
- Powerful steam or high pressure cleaning machines
